

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions of claims in the application:

Listing of Claims:

1. (Previously presented) A license enforcement system, comprising:
 - a monitoring component that determines a current number (M) of users logged on to an application under a license;
 - an enforcement component that dynamically takes corrective action upon M exceeding an authorized number (N) of users permitted under the license;
 - a validation component that checks stored license data at regular time intervals to ensure that the data has not been corrupted;
 - a license store for securely storing license data;
 - a backup store that contains copies of the stored license data, the validation component checks the validity of the copies of the license data in the backup store upon determining that stored license data in the license store is corrupt, restores the corrupt license data from the backup store to the license store upon confirming the validity of the copies, and initiates shutdown of the license enforcement system upon determining that the copies in the backup store are invalid; and
 - an oversight component that observes the monitoring component and the enforcement component to ensure that they have not been deactivated, wherein the oversight component restarts the monitoring component when it stops operating, and shuts down the application when the monitoring component cannot be restarted.
2. (Previously presented) The system of claim 1, wherein corrective action includes providing a warning to one or more users.
3. (Previously presented) The system of claim 1, wherein the corrective action comprises denying one or more users access to a license target, the license target including one of the application, a system and a device.

4. (Cancelled)
5. (Cancelled)
6. (Cancelled)
7. (Previously presented) The system of claim 6, wherein the validation component restores corrupted stored license data by copying data in the backup store to the license store.
8. (Cancelled)
9. (Cancelled)
10. (Cancelled)
11. (Currently Amended) A license enforcement system comprising:
 - a monitoring component that monitors use of a licensed application by one or more users in accordance with a license agreement, the license agreement specifying at least that the licensed application is not to be run in a workgroup environment;
 - an enforcement component that takes corrective action upon notification by the monitoring component that there has been a violation of the license agreement;
 - a validation component that checks stored license data at regular time intervals to ensure that the data has not been corrupted; and
 - an oversight component that observes the operation of the monitoring component and restarts the component when it fails to operate properly, the oversight component shuts down the licensed application when the monitoring component cannot be restarted.
12. (Previously presented) The system of claim 11, wherein the monitoring component monitors user logins.

13. (Previously presented) The system of claim 11, wherein the monitoring component monitors hardware associated with the execution of an application.
14. (Previously presented) The system of claim 11, wherein the monitoring component monitors use of other applications being executed concurrently with the licensed application.
15. (Currently Amended) The system of claim 11, wherein the corrective action ~~corresponds~~ includes warning one or more users of the licensing agreement violation.
16. (Previously presented) The system of claim 11, wherein the corrective action corresponds to shutting down the licensed application.
17. (Cancelled)
18. (Previously presented) The system of claim 11, further comprising a license store for storing licenses and data associated therewith.
19. (Cancelled)

20. (Currently Amended) A licensing system comprising:
- a license store that receives license data from a license component associated with a licensed application, the license data includes at least a license key and a hardware ID;
 - a backup store that receives a copy of the license data for backup storage;
 - a validation component that ~~checks stored license data~~ compares the license key and hardware ID stored in the backup store with those in the license store at regular time intervals to ensure that the license data in the license store has not been corrupted;
 - a monitoring component that monitors license data and utilization of the application to determine license violations;
 - an enforcement component that takes corrective action in response to notification of a license violation by the monitoring component; and
 - an oversight component that observes the operation of the monitoring component and restarts the component when it fails to operate properly, the oversight component shuts down the licensed application when the monitoring component cannot be restarted.
21. (Previously presented) The system of claim 20, wherein the license component comprises:
- an installation component that saves license data to the license store; and
 - an activation component that provides a mechanism for activating the license component, wherein license data is saved to the license store by the installation component after the license is activated.
22. (Previously presented) The system of claim 21, wherein license data includes a value indicative of the number of licenses provided by the license component.
23. (Previously presented) The system of claim 21, wherein the license data includes license issue date and expiration date.
24. (Previously presented) The system of claim 21, wherein the license data includes a hardware ID indicative of the hardware components of a computer system utilized to execute the licensed application and a license ID that uniquely identifies the license component.

25. (Previously presented) The system of claim 20, further comprising a bypass component that disables the monitoring component and/or the enforcement component.
26. (Previously presented) The system of claim 25, wherein the bypass component is a license component with a license code within a bypass range.
27. (Previously presented) The system of claim 20, further comprising an interface component to facilitate information retrieval by a user.
28. (Previously presented) The system of claim 27, wherein the interface is utilized by the enforcement component to provide notification to users in violation of a licensing agreement.
29. (Currently Amended) A method for enforcing licensing agreements comprising:
monitoring license data in a data store ~~and use of a licensed application~~ corresponding to a licensed application, wherein the licensed data includes at least a specification of at least one second application that is not to be run in conjunction with the licensed program;
monitoring use of the licensed application on a system;
determining license violations;
initiating corrective action in response to detection of a license violation;
checking stored license data at regular defined intervals to ensure that the data has not been corrupted;
determining that monitoring of the license data has stopped;
restarting the monitoring upon determining that the monitoring has stopped; and
shutting down the licensed application when the monitoring cannot be restarted.
30. (Previously presented) The method of claim 29, wherein determining license violations comprises comparing the number of users licensed to utilize the application against the number of users actually using the application.
31. (Previously presented) The method of claim 30, wherein the number of users actually using an application corresponds to the number of users logged onto a system.

32. (Previously presented) The method of claim 29, wherein determining license violations comprises comparing the number of licenses to the number of devices, a violation occurring where the number of devices is greater than the number of licenses.
33. (Previously presented) The method of claim 29, wherein determining license violations comprises monitoring computer hardware configuration and comparing it with an allowable configuration specified by the licensing agreement.
34. (Cancelled)
35. (Previously presented) The method of claim 29, further comprising retrieving license data from a backup store and saving it to the license store when license store data has been tampered with or corrupted.
36. (Previously presented) The method of claim 29, wherein the license data is encrypted.
37. (Previously presented) The method of claim 29, wherein the corrective action includes warning a user of the violation.
38. (Previously presented) The method of claim 29, wherein the corrective action includes denying one or more users access to the application.
39. (Previously presented) A computer readable medium having stored thereon computer executable instructions for carrying out the method of claim 29.

40. (Currently Amended) A method of adding licenses to a computer system comprising:
- activating a license component;
 - installing the license component on a computer, wherein installing the license component includes storing license data in a license store, the license data including a license key and a hardwire ID identifying the computer on which the license component is installed;
 - storing a copy of the license data in a backup store;
 - ~~checking stored license data in the license store to ensure that the data has not been corrupted;~~
 - retrieving the license key and hardwire ID from the backup store at periodic times;
 - comparing the retrieved license key and hardware ID with the corresponding license key and hardware ID in the license store at the periodic times;
 - determining whether the stored license data in the license store has been corrupted based on the comparison;
 - deleting the stored license data in the license store when it is determined that the license data is corrupt;
 - checking the validity of the copy of the license data in the backup store;
 - restoring the license data from the backup store to the license store when it is determined that the copy of the license data in the backup store is valid; and
 - initiating shutdown of the computer system when it is determined that the copy of the license data in the backup store cannot be validated.
41. (Previously presented) The method of claim 40, wherein activating a license comprises:
- generating a hardware ID;
 - locating the license code;
 - transmitting the hardware ID and a license code to an activation database;
 - receiving an activation code from the database; and
 - providing the activation code to the license component.
42. (Previously presented) The method of claim 40, wherein license data includes a number of licenses.

43. (Previously presented) A computer readable medium having stored thereon computer executable instructions for carry out the method of claim 40.

44. (New) The system of claim 1, wherein the validation component periodically checks the validity of the license data in the license store by comparing a license key and hardware ID from the backup store with the corresponding license key and hardware ID in the license store.

45. (New) The system of claim 44, wherein the comparison between the hardware ID in the license store with the corresponding hardware ID in the backup store allows for a tolerance to account for minor hardware changes.
